

AFTER DOWNLOADING ETS

What about my projects and licenses?

- Installing this software will NOT remove Databases/Projects.
- Installing this software will NOT remove ETS Licenses.

Before installing

- ALWAYS MAKE A COMPLETE BACKUP OF YOUR ETS DATABASES
- Please be aware that depending on the ETS3 version you upgrade from, a conversion of your existing database might take place as soon as you start this new version. So please realize that this database conversion, depending on database size and computer performance, might take a while (possibly several hours).

Install instructions

- If you have a previous ETS3 Professional installed on your computer; uninstall it FIRST: "Start" -> "Control Panel" -> "Add/Remove Programs" -> "ETS3 Professional" -> "Remove"
- If not removed automatically; uninstall "Device Editor" (DevEdit): same steps as for ETS3 Professional.
- Unzip the entire contents of the zip file into a folder (directory) of your choice, and run "ETS3ProSetup.exe".

After installation

- In order to activate the newly implemented function it's necessary to reset the active workspace: "View" -> "Workspaces" -> "Reset"
