

KNX in motion

■ Press Release ■ Presseinfo ■ Communiqué de presse

The Worlds grow together

Once more KNX is underlining it's leading role as World's only Standard for Home & Building Control according to EN50090. With new interfaces to IP, Web, Audio and BACnet the variance of applications has been increased extensively.

KNXnet/IP protocol brings the advantages now to KNX

The Internet Protocol is meanwhile used as the basis for many communication applications as it has reached an enormous diffusion. In computer networks it is run on the fast Ethernet communication medium.

This allows an easy connection to higher level building applications and the Internet. The KNXnet/IP protocol series brings the advantages of the Internet now to the KNX installer and will open new business fields.

KNX/EIB and Audio grow together

Multiroom systems have been growing closer to intelligent building control systems. Meanwhile several Audio systems are available on the market that can be controlled through KNX/EIB.

With Multiroom the installer can now emotionalize the rather technical topic KNX/EIB and get new buyers excited for modern building technology.

BACnet and KNX:Two Complementary Open Standards

BACnet and KNX have decided a common standardized mapping for both open standards. It's documented in annex H.5 of BACnet standard. The mapping is pushing the integration of both preferred communication standards in the building: BACnet for building automation and KNX for the system level. This will promote planner's preference to combine the communications standards KNX and BACnet for a common building management system and it will also simplify the facility management.

ETS 3: moving steadily ahead

The demand to connect KNX/EIB with communication via Ethernet or Internet is increasing. Therefore the advanced IP integration is main focus of the ETS 3. The actual ETS version 3.0d incorporates further enhancements, e.g. faster programming of devices, rapid access to relevant diagnostics functions, faster monitoring of bus telegrams and extended on-line help, only to mention some of them.

In sum these are many strong benefits for all ETS 2 users to accelerate their upgrade to ETS 3 now. This will ensure to work even more productive and customer oriented.
