

Window Door Sensor

1. Window Door Sensor Features

Cascoda's KNX IoT Window Door Sensor enables the reporting the open/close status of a windows or door.

That all-important door, window, cabinet, or safety gate – don't roam your home to confirm it's shut, just inform the system of the status. You can combine the sensor with a lighting that turns on when you open a door and turns off when you close it – for example ideal for a walk-in closet.
