

# Environment Sensor

## 1. Environment Sensor Features

Cascoda's KNX IoT Environment Sensor provides environment measurements compliant to the Indoor Environmental Quality (IEQ) provisions of the EU Energy Performance of Buildings Directive (EPBD).

It is battery powered and includes a high-resolution E-Paper display and GUI users, installers, configuration settings & QR Code, and to show current environment values.

Measures the following environmental variables periodically:

- Temperature
- Relative Humidity
- Atmospheric Pressure
- Carbon Dioxide (CO<sub>2</sub>)
- Volatile Organic Compound (VOC) Index
