

IoT Router

1. IoT Router Features

Cascoda's IoT Router enables KNX communication between KNX IoT and KNXnet/IP. It is part of the KNX IoT Hub.

- System component for seamless routing between KNX IoT, KNXnet/IP, and KNX TP devices
- Compatible with all KNX IoT & KNX certified devices, due to a large set of supported data points
- Easy wired connectivity to an IP router via the LAN port

To have a working system also a KNX IP router (with routing functionality) should be part of the system.
