KNX Secure Product: ABB i-bus® KNX IP Secure - IPR/S 3.5.1

Nowadays security is one of the key decision factors when it comes to smarter buildings. With an increasing trend towards integration of smarter buildings into IP networks, ABB has become one of the first KNX manufacturers to offer a more secure router with the launch of the new ABB i-bus® KNX IP Router Secure (IPR/S 3.5.1).

Further enhancing the security of the industry standard KNX protocol, the new ABB router encrypts all communication across a building's IP backbone and also secures the commissioning, thereby reducing the risk of an attack over the IP network. It aims for the highest possible security on the market, based on the encryption standard ISO/IEC 18033-3 AES 128.
