### **KNX Secure Product: Gira KNX IP-Router Secure**

The Gira KNX IP-Router connects KNX lines via IP networks with the function of a line / area coupler und serves as ETS data interface.

Next to the many benefits of an IP infrastructure, it also offers of course an obvious threat of being tampered with. Thanks to the upcoming support of KNX Secure for a protected communication, the Gira KNX IP Router is the first choice to counter these kind of attacks. Smart additional functions, such as a KNX timer or the KNX telegram recording on microSD card, top the device off.
