KNX Secure Products by Evertex: KNX/IP Secure Router and KNX/IP Secure Interface

The KNX / IP Secure Router and the KNX / IP Secure Interface (2TE) authenticate and encrypt KNX and IP telegrams. Up to eight tunnel connections can be used encrypted or unencrypted. The communication performance is impressive with up to 49 telegrams per second. The KNX/IP Secure Router can be used as a line or area couple.

Both devices have a buffered real-time clock and SNTP server. An OLED display shows important device parameters. Telnet provides further parameterization and diagnostics functions. They are powered directly from the KNX bus.
