KNX Secure products: Jung KNX IP Interface and KNX IP Router

KNX IP Secure and Data Secure represent secure data transmission in KNX systems. In this way, the KNX IP Interface (IPS 300 SREG) with 36 mm width encrypts the data communication in the network and ensures secure transmission of all KNX telegrams. Up to eight tunneling connections can be used for encryption.

The KNX IP Interface has an OLED display to show important device parameters. A separate software (Telnet) allows further parameterization and diagnostics. Additionally, the device is powered directly from the KNX bus.
