### **KNX Secure products by Weinzierl- KNX RF Push Button Insert 440 secure and KNX IP Router 751 secure**

KNX RF Push Button Insert 440 secure is a universal solution for secured and wireless wall switches. Powered by a standard battery (CR2032) it mechanically fits into numerous plastic parts available on the market and convinces with a soft keystroke. The built-in USB Interface allows direct configuration of the device by ETS (OTA configuration with ETS is possible, too).

The bus-powered and compact KNX IP Router 751 secure (18mm) allows encrypted forwarding of telegrams between different lines based on KNX IP Security through LAN (IP) as fast backbone. In addition, this device offers secured tunneling connections which can be used for bus access (e.g. for ETS programming). Also available as secure KNX IP interface.
