ETS6 ROADSHOW 2025 MARKS GLOBAL SUCCESS, SHOWCASES POWER OF ETS 6.3

ETS6 takes center stage during the month of May with 24 roadshow stops all over the world.

BRUSSELS – 24 JUNE 2025 – Throughout the month of May 2025, KNX Association put the spotlight on its revolutionary Engineering Software Tool, ETS6. With 24 different events on a global scale, both in-person and online, KNX Professionals had the opportunity to discover what makes ETS6.3 stand out as the ultimate tool for smart home and building automation projects. The global ETS6 roadshow event was attended by thousands of interested professionals who were introduced to the latest innovative updates of the ETS6 software. Attendees could also benefit from software rebates, a free ETS App and partake in a lottery of over 30 KNX devices.

One global event and 23 National ETS6 Roadshow stops

The ETS6 Roadshow was anchored by a global event organised by KNX Association and sponsored by 13 KNX Manufacturers. The event took place online on the 6th of May and brought together an audience of 1600 professionals for an inspiring and highly informative session on ETS 6.3 as well as KNX Member presentations. These interactive sessions offered deep technical insights, live demonstrations, and direct engagement with the ETS Product Manager during the ETS Q and A sessions.

Complementing the global event, 23 national events were held across Europe, Asia, South America, and beyond - each tailored to local markets and delivered with the dedication of KNX National Groups and its ETS6 Ambassadors. These local events provided hands-on sessions, real-world project showcases, and valuable networking opportunities, ensuring that the benefits of ETS 6.3 reached professionals in their native languages and regional contexts. The KNX National Group events could count on a combined audience of 1700 participants from 25 countries.

ETS6.3's powerful new features in the spotlight

Undoubtedly, the hands-on sessions were the highlight of the roadshow. During these live demonstrations, the powerful new features and system extensions of ETS6.3 were showcased in action. A deep dive into the latest Project Tracing and Project Password Manager ETS Apps showed how securing and managing projects can be achieved faster and easier than ever. Michael Critchfield, ETS Product Manager at KNX Association, reflects on the success of the roadshow.

"With ETS 6.3.1, we have not only listened to our community - we have delivered meaningful enhancements that fortify the daily work for our KNX professionals. Whether you're configuring a single-family home or a large-scale commercial building, ETS 6.3.1 offers more robust workflows, transparent diagnostics, and extensive support for future-proof KNX IoT installations."

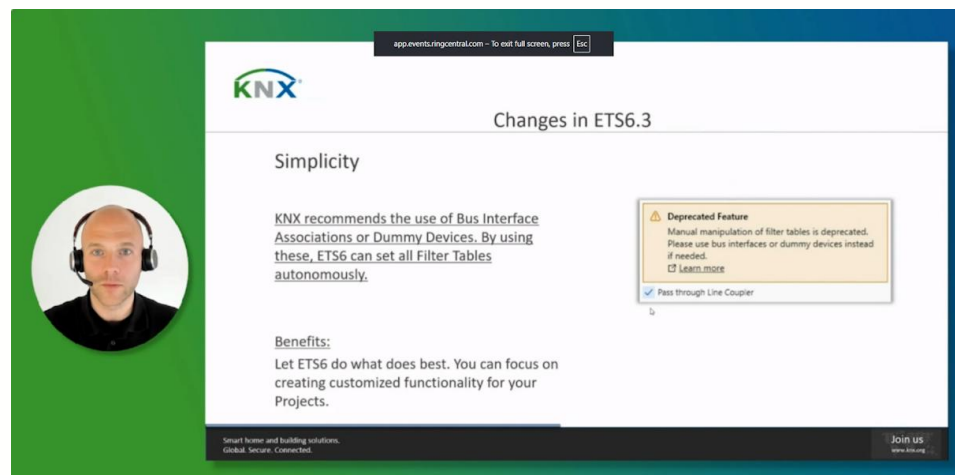

The Future of ETS: Always looking ahead

The ETS6 Roadshow 2025 reaffirmed KNX Association's dedication to driving innovation, quality and simplicity in its smart home and building solutions and the future is looking bright, with more groundbreaking updates on the horizon. KNX Association extends a sincere thanks to all who contributed to the success of the ETS6 Roadshow: all National Groups and its ETS Ambassadors, speakers, KNX Manufacturer Sponsors and everyone attending the ETS6 Roadshow events.

The sessions of KNX Association's ETS6 Roadshow global event can still be watched on our [YouTube Channel](#).

About KNX

KNX Association develops and promotes the KNX standard to offer smart home and building solutions on a worldwide scale, ranging from lighting and blind control to various security systems, heating, ventilation, air conditioning, monitoring, alarming, water control, energy management, smart metering as well as household appliances, audio/video and many more. All these building applications can be configured with a single, manufacturer independent design and commissioning tool (ETS), with a complete set of supported communication media (TP, PL, RF and IP) as well as an extension of the KNX technology towards the Internet of Things (KNX IoT). KNX is approved as a European (CENELEC EN 50090 and EN ISO 22510) and an International standard (ISO/IEC 14543-3). This standard is based on more than 30 years of experience in the market. Over 500 manufacturers worldwide from different application domains have more than 8,000 KNX certified product groups in their catalogues. The KNX Association has partnership agreements with more than 135,000 installation companies in 190 countries.
